

Title: Engaging Students with Scaling Up Solar Power and Clean Energy Solutions

Author: Adam Hall

Million Solar Stars (MSS) is a collaborative with Dr. Jane Goodall's Roots & Shoots program to engage students in scaling up solar power and clean energy solutions. Students have fun learning about the science of solar power as they engineer solar model racecars and help school leadership analyze the benefits of installing pilot and commercial solar arrays. In addition, MSS is spearheading "Light & Life," a service learning and humanitarian project aimed at providing solar reading lights to underserved learners around the world. As we call our youth to action in moving to a 100% renewable energy society, join us to help students scale up solar power and rise as one Million Solar Stars.
