

# Practical Passive Solar

Steve Kawell

# Higher Level of Design

**Good Passive Solar Design Synchronizes a Building to the Daily and Seasonal Solar Cycles of Our Natural World for the Benefit of the Occupants.**

- 1) Free Energy Delivery ..... Make it an Asset Not a Liability.**
- 2) Reduce Heating and Cooling Loads..... Saves Energy Dollars.**
- 3) Greater Occupant Comfort.**
- 4) Creates a Healthy, Vibrant Living Space.....People, Pets, Plants.**
- 5) Connects Occupants to Our World's Natural Cycles.**
- 6) Survivability.**

**Direct Gain Design.**

# Orientation, Orientation, Orientation

# Dec. 21 Winter Solstice at Noon

**Self Regulating**

**30 Degrees off True South**

**Summer**

**Winter**

# South Facing Window area

Rule of Thumb:  
10 - 15% of a rooms floor area.

- 1) Size of interior space.
- 2) Thermal mass.
- 3) Glass type. (Solar Heat Gain Coefficient)
- 4) Shading.

**Don't over glaze!**

# Thermal Mass

## **Passive Solar Battery.**

**1) Stores Solar Energy.**

**2) Stabilizes interior temperature swings.**

**3) Allows for greater window area.**

**4) Utilize common interior elements.**

Concrete Slab w/ Stone Tile.

Stone Veneer Fireplace.

Kitchen Countertops.

$\frac{5}{8}$ " Drywall Throughout.

# South Window Shade Designs

SketchUp Solar Shading Modeling Tool.

**Rule of Thumb:**

**2 ft. overhang, 1.5 ft. above top of window.**

**Larger overhang tempers oversize window area.**

**Observe the effects of the sun on your structures.**

Winter Solstice

Equinox

Summer Solstice

**Summer**

**Winter**

# Additional Passive Cooling Strategies

**Appropriate Passive Solar Design Reduces Summer Overheating**

## **Night Flush**

- 1) Stack Effect Ventilation Strategy.
- 2) High ventable windows.
- 3) Ventable skylights.
- 4) Ceiling fans.
- 5) Whole house attic fan.

**Minimize Western Elevation Sun Exposure**

## West Elevation Shading

# Passive Solar Support Team

1) Very High Level of Building Envelope Insulation.

2) Heat Pump Heating/Cooling System.

3) Solar Photovoltaic Array.

4) Heat and Energy Recovery

5) Window Treatments.

Provide Privacy.

Increased Comfort Against Cold.

Reduces Energy Costs \$\$\$.

Adjust Incoming Solar Radiation.

Dark Skies.

6) Solar Flywheel.

Programmable Thermostats
